CATCH THE WAVE FOR CUSTOM BLACK ALLOYS IN THE UK

McGard Black series wheel locks are now available to compliment the growing rise in popularity of black alloy wheels in the UK. This comes as a result of the wide adoption of black wheels by racing teams involved in European motorsport such as the BTCC.

During this years Autosport show held in Birmingham, McGard, the world's leading manufacturer of wheel locking devices, launched the new locks termed Black Edition. As black alloy wheels are getting more and more popular, customers are also looking for a way to secure their expensive wheels in an effective and attractive way.

The McGard 'PVD' coated Wheel Lock Bolt Head is a high tech coating which yields the best corrosion resistance in the industry and gives the Bolt Head a more contemporary appearance. Durability is improved over other coatings which are usually applied like paint. PVD has a harder surface than other coatings leading to better long term wear resistance. In normal use this allows the Bolt Head to retain its brilliance for many years.

The coating meets 'ELV' requirements and is therefore more environmentally friendly. At present there are already more than 40 P/N's available at a RRP of just 39.99 GBP.

DETAILS

Black Edition Security Wheel Locks

- best corrosion resistance in the industry
